UML

✚ projects

Wikeez
- A Ruby on Rails web application where you can create Wikis.
- Uses several gems like Devise, Stripe, Faker, Figaro.
- User authorization allows a standard user to contribute and create public wikis, while premium (paid) users can create private wikis and add contributors.
- Test Driven Development with RSpec.
- PostgreSQL database, hosted on Heroku.

Linkit
- A Ruby on Rails web application for link sharing, inspired by Reddit.
- Bootstrap is integrated for UI elements on the frontend.
- PostgreSQL database, hosted on Heroku.

Shoutout
- A frontend chat-based application inspired by Slack; built with Angular 2 + TypeScript.
- Backend hosted on NoSQL Firebase database.

Tunz
- A simple music streaming web application inspired by Spotify.
- Responsive in design and built using AngularJS (v1).

Property Tax Web Portal
- Conducted interviews and facilitation of brainstorming sessions with key stakeholders from various branches to collect information on business processes and user requirements.
- Served as liaison between subject matter experts and IT for technical reviews and multidisciplinary project meetings.
- Worked with project manager to design scope of this project by using details from collected information and presenting workflow analysis of projected efficiencies.
- Developed user stories with wireframes, site maps, and content inventories.
- Designed testing cases with the team to ensure quality meets standards.
